

POWER LUB

UNLOCKS LUBRICATES
PENETRATES

WITH VEGETABLE-BASED LUBRICANT

It deeply penetrates the surface, also in presence of:

Oils and grease, even cooked - Rust
Carbonate and general dirt-
Calcareous dust, etc.

Relevant application

Heavy goods vehicles workshops and car repair shops.

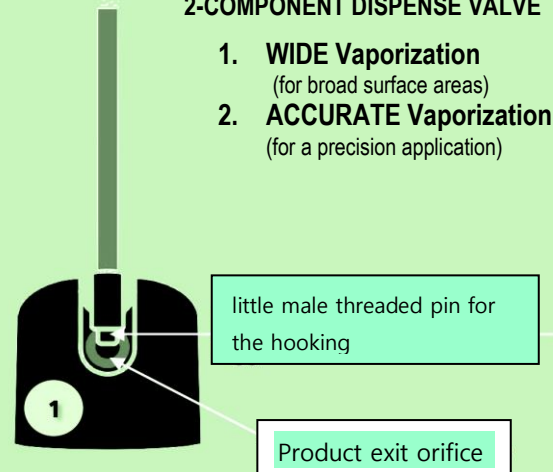

Forklifts (chain lubricant). Aggregates and marble quarries. Maintenance of components submerged in water with rust and organic dirt. Suitable when cleaning, lubricating, protecting, deoxidizing and unlocking is required.

The instructions of this document are based on the product characteristics and on the applications we already know. Generally speaking, no legal obligation or responsibility may be deduced from such data.

Product code
3AG400ICE
400ml container

2-COMPONENT DISPENSE VALVE

1. **WIDE Vaporization**
(for broad surface areas)
2. **ACCURATE Vaporization**
(for a precision application)

little male threaded pin for the hooking

Product exit orifice

For a proper straw supply, this must be fully lowered horizontally until its end position, namely until the male threaded pin is fully inserted in the exit orifice

Spray POWER LUB on the surface to be treated, from a distance of around 20 cm.

Wait for the product to penetrate the surface and perform the desired action. (The time varies depending on the situation and the sediment or oxidation of the surface)
